

I'm not robot!

I.e. =EXACT(B18, C18). Here, I need to compare between B18 & C18 cell; hence it is entered in the function arguments of an exact function. Click ok once it is entered. An EXACT function returns TRUE value because both the cell contains the same value, i.e. 99. Here Exact function ignores the format pattern of cells. In the below-mentioned example, the EXACT function returns TRUE value because both the cell contains the same date value, i.e. Cell "B19" contains the date value (5/16/18) in number or general format whereas in cell "C19" date value is present in date format. Here Exact function ignores the format pattern of cells. Things to Remember The EXACT function is case-sensitive. I.e. Capital letters are not equal to small letters. The exact function in Excel returns the false value if there is a difference in case pattern between text string, i.e. sentence case, lowercase, uppercase, proper case & toggle case. The exact function in Excel returns the false value if there is Leading or trailing space & Extra space between alphabets in the text between two text strings. EXACT Function in Excel ignores the formatting difference between the two cells. E.G. 0.08 = 8% \$99 = 99 Recommended Articles This has been a guide to the EXACT function in Excel. Here we discuss the EXACT Formula in Excel and how to use the EXACT Function in Excel along with practical examples and downloadable excel templates. You can also go through our other suggested articles -

Excel If Function with Calculations "IF function" can be used in complex calculations. See the example: If a sales executive sells more than 5 items, the company will pay incentive 40 rupees per item sold and if the sales executive sells less than 5 ... 09/02/2017 · Bottom line: Learn how the SUBTOTAL function works in Excel to create formulas that calculate results on the visible cells of a filtered range or exclude hidden rows.
